This chart describes the keystrokes used in Tavultesoft Keyman with Unicode 5.0 Cameroon Characters and the US (QWERTY) Keyboard.

Use the semicolon (;) for the Cam key and the colon (: ) for the special (Spcl) key. Open the document but before typing select a font style from one of: Doulos SIL or Charis SIL. From the Keyman icon in the System Tray (bottom right of screen) select the Cameroon Unicode Keyboard.

A non-combining version of any tone/diacritic marker may be inserted by itself into a text by typing the desired tone or diacritic key, followed by '+'. Note that this feature is not available for the four complex tones, dot-under, or tilde-under.

The Unicode version of Cameroon Characters is ultimately designed to work with any Unicode font, although the character 'Q' is currently\* only in the PUA (Personal Use Area) of the SIL Unicode font family.

When adding nasal or tone diacritics, the typing sequence is always: Nasal ( ~ □ , ) + Tone ( ^ ~ etc.) + Vowel.

Note: Unicode fonts have a much larger leading (space between the lines) than non-Unicode fonts. In Microsoft Word or Publisher you can change the line spacing to Multiple .75.

\*As of Mar 2007 – Unicode 5.0
