## Typing all languages

Since the creation of the Unicode system for Ethiopic many letters have become available on the computer. Unicode defines 461 letters for Ethiopic writing in many languages. This is too many letters for Tigrinya so to avoid typing unexpected letters they are not allowed in the Tigrinya keyboard. However, on the occasion that you need to type Ethiopic letters outside of Tigrinya, you can do so with the “Unicode Keyboard”.

There are two ways to start the Unicode keyboard:

1. Type Ctrl + Alt + Y this should make the  icon appear in your task bar and the Unicode keyboard is ready.
2. Click on the  icon in your task bar then select the  icon and the Unicode keyboard is ready.

The typing for letters of other languages are now shown:

Ge'ez numbers can also be typed with the Unicode keyboard without requiring the typing of a ' before a number. This way is a little easier than typing numbers from the Blin keyboard.
